SUMMARY

Analytical and technically grounded IT student transitioning into Business Analysis and Data Analytics. Bridges the gap between raw data, technical constraints, and executive strategy by translating business needs into structured process flows and actionable reports. Leverages a strong foundation in database architecture and software engineering to troubleshoot complex data models, clean data anomalies, and coordinate stakeholder testing, ensuring data-driven solutions align with business objectives.

EDUCATION

Pamantasan ng Lungsod ng Pasig — Expected Graduation: April 2027

Bachelor of Science in Information Technology

PORTFOLIO & EXPERIENCE

1816 Car Rental Co. — Business Analysis Capstone

- Elicited functional requirements through client interviews and integrated research-adviser recommendations directly into formal system documentation.
- Authored project data privacy protocols and coordinated stakeholder User Acceptance Testing (UAT) with 21 participants (owner, renters, and technical evaluators).
- Developed backend reporting modules, generating a 150-booking demonstration dataset and revenue CSV exports to support data-driven fleet management.
- Evaluated system quality using ISO/IEC 25010 standards, achieving a 3.72/4.00 Grand Overall Weighted Mean (Strongly Agree) for functionality, reliability, and usability.

SQL Data Cleaning & Exploratory Data Analysis (Layoffs Dataset)

- Cleaned a messy global layoffs dataset using MySQL to prepare raw data for accurate analysis and reporting.
- Removed duplicate records using Common Table Expressions (CTEs) and `ROW_NUMBER()`, and standardized text and date formats.
- Executed advanced self-joins to impute missing industry data and calculated rolling totals using window functions to extract workforce reduction trends.

Power BI Superstore Data Modeling

- Diagnosed and resolved a critical Many-to-Many cardinality model failure that prevented dashboard visuals from rendering properly.
- Traced the root cause to 700 phantom null rows using Power Query, filtered out anomalies, and reformatted the primary key.
- Established a clean 1-to-Many relationship, restoring data integrity and allowing for accurate visual reporting.

Systems Analysis & Database Architecture (CourseDock / RevOn ERP)

- Gathered user requirements for academic monitoring and fleet reservation systems.
- Designed relational MySQL database schemas and mapped As-Is/To-Be business process flows to handle billing, reporting, and curriculum tracking.

KEY ACHIEVEMENTS

- **System Evaluation Success:** Secured a 3.72/4.00 Grand Overall Weighted Mean (Strongly Agree) from 21 stakeholders for the 1816 Car Rental capstone system.
- **DataCamp Certification:** Introduction to SQL (October 16, 2026).
- **1st Place, Best Presenter:** Research Congress (2023).
- **Academic Excellence:** Consistent Dean's Lister and President's Lister.
- **3rd Place:** Extemporaneous Speech (High School).

SKILLS

- **Business Analysis:** Requirements Elicitation, User Stories, Acceptance Criteria, BPMN / Process Mapping, UAT Coordination, ISO/IEC 25010 Evaluation.
- **Data Analytics & BI:** SQL (MySQL), Exploratory Data Analysis (EDA), Power BI, Power Query (ETL), Relational Data Modeling.
- **Reporting & Tools:** Microsoft Excel (Pivot Tables, Data Validation, Conditional Formatting, SUMIFS/COUNTIFS), Jira.
